

Internship Logbook

Date: 01/08/2022 to 05/08/2022 (Week 1)

Objective of the activities: Icebreaking session and assignment of first task

Contents:

1. Understanding in technical knowledge

The first task assigned allowed me to learn more about the technologies used (PHP, MySQL, among others). There was the opportunity to apply knowledge obtained from the modules back in university.

2. Understanding in non-technical knowledge

The opportunity to work on non-technical skills such as communication is present at SPASSOLAB. To be able to complete all necessary tasks correctly and on time, there is a need to properly communicate with the manager in charge as well as colleagues. During the usual weekly meeting, I was able to understand more about the current project, mainly the business model that the client has thought about, thereby allowing me to see things from a business point of view rather than only technical point of view.

3. Development of experience

Through the task assigned to me this week, I was given the opportunity to grow my knowledge in PHP, MySQL, jQuery, and AJAX. I was able to understand how pages of a website are launched on the live version of the website. All these have helped develop a bit more the experience in developing software.

4. Development of experience for future career

The experience obtained in this week's task will be much useful for my future career in tech companies as I have gain knowledge from both technical and non-technical knowledge.
